1 ICP Iterations Using PCA

To find the best ICP performance with normals from PCA, we run a set of exhaustive experiments given different numbers of neighbours as input. This is similar to a neighbourhood parameters tuning process and our method can help applications such as ICP to avoid such parameter searching procedures.

Full PCA	s01	s02	s03	s04	s07	s08	s09	s10	s11	s13	s14	s15	s16	s19

nb40	14	F	18	18	F	F	13	16	9	F	28	16	8	F
nb50	25	F	29	17	F	F	10	18	9	F	30	22	8	24
Min iter.	14	31	12	16	14	10	9	14	9	33	17	13	7	12

Table 1: Exhaustive number of neighbours search for PCA to achieve the best point-to-plane ICP performance. We reported the minimum iteration numbers for each object in our ICP convergence study, after trying all number of neighbours.
